Foundation is getting ready for FINANCE 8.4!
GO-LIVE July 1, 2006!

Browsers to use with PeopleSoft 8.x:
Web Browser and Client Operating System Certification for All Applications:

Internet Explorer 5 and above are the recommended web browsers.

The following are the combinations of web browser and client operating systems
PeopleSoft is certifying for all PeopleSoft 8 applications on PeopleTools 8.17:

- Internet Explorer 6 on Windows 98, NT 4, Windows 2000 and Windows XP.
- Internet Explorer 5 and 5.5 on NT 4, Windows 9x, and Windows 2000
- Internet Explorer 5 on Mac OS 7.5 and above

- Netscape Communicator 4.7x on NT 4, Windows 9x, and Windows 2000
- Netscape Communicator 4.72 on Mac OS 7.6.1 and above
- Netscape Communicator 4.72 on Linux

Client hardware requirements for PeopleSoft FIN v 8.4 Upgrade

In the PeopleSoft Internet Architecture, the web browser renders the user interface. The web browser
receives the HTML generated by the application server and displays the graphic representation of the
HTML. The CPU speed of the client has a great influence on how fast these HTML pages are rendered.

PeopleSoft recommends end-user workstation hardware requirements based on such operations as
intensive data-entry, navigating between many pages, etc. Since these requirements are based on real-
world operating scenarios, they are higher than the manufacturer’s minimum for a given web browser and
operating system combination. However, PeopleSoft products will function, on platforms meeting the
manufacturer’s minimum requirements for a given web browser and operating system combination, but
will not deliver the optimal user experience.

General end user workstation hardware recommended requirements are as follows:

- PC: 533 MHz Pentium III recommended or equivalent processor 350 MHz minimum. MAC: 266 MHZ
  minimum.
- The following results are benchmarks completed for PC’s and MAC’s:

<table>
<thead>
<tr>
<th>System</th>

</table>

### Memory

For an optimal user experience, an end user should have a system with 256MB RAM. A minimum of 128MB RAM (MAC: 320 MB RAM/ A minimum 128 MB RAM) on the client is required for all power user applications. This assumes that a typical power user will run three browsers (two for transactions, one for process monitor).

### CPU

CPU speed affects HTML page rendering and refresh time. For an optimal user experience it is recommended for end users to have a 533 MHz Pentium or equivalent processor (MAC: 400 MHz PowerPC G3) with a decent graphics adapter. Users will not see much improvement with CPUs faster than 800 MHz (MAC: 450 MHz).
